HAPPY NEW YEAR!!!

Finally Shed The Old This Year – It’s Costing You Much More Than You Think

January 2021

BRANDONBUSINESS
machines

505 W. Robertson Street
Brandon, FL 33511

New Hours:
Monday – Thursday = 8:00 – 5:30
Friday = 8:00 – 5:00

When was the last time you updated your technology? Between your hardware and software, if you are still doing business on older technology, you could be putting yourself at risk, and it could end up costing you big. As we begin a new year, it’s time to take a close look at the tech you rely on every day.

While many small businesses tend to put off major technology purchases due to the upfront costs, by doing so, you may be opening yourself up to major costs down the road. These are hidden costs that businesses don’t always consider when they decide to “hold off” on investing in new equipment or the latest software.

Here are five ways outdated technology can take a toll on your business:

- 1. It leads to a loss in productivity.** Old technology has a habit of getting slow. This means your team has to waste time waiting for their PCs to turn on and their apps to load. Even well-maintained equipment is going to wear out over time. This problem is only compounded when your team has to use software that no longer works as it once did. Eventually, programs that once worked well together start to experience hiccups, and you risk losing data.
- 2. It leads to a loss of customers.** Your customers want to know your data (which may also be their data) is secure.

Continued on pg.2

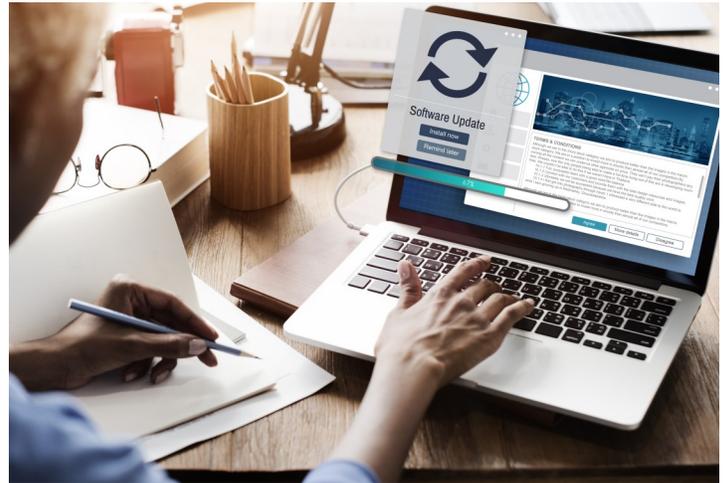

Continued from pg.1

If you're using outdated tech, there's a good chance that data IS NOT secure. One Microsoft survey revealed that 91% of consumers would end their relationship with a business that was relying on outdated technology.

3. It leads to a loss of employees. If employees have to deal with slow hardware and poorly-integrated software every day, they're going to get frustrated. They're going to get even more frustrated if nothing is done about it. The end result is high employee turnover. This alone can be a huge cost for a small business to absorb.

4. It leads to a loss of support. Over time, developers stop supporting their older products so they can focus on their new products. This also means they're devoting more attention to the customers who are using the newer versions. This can leave you in the dark if you run into a problem that you need help with. You may have to call in a third-party specialist to answer your question and fix your problem, and they will charge you accordingly.

5. It leads to a loss of security. A loss in support also means you aren't going to see security patches for your aging hardware or software. This makes you highly vulnerable to all kinds of cyberthreats, including data breaches, malware

infections, and all kinds of other cyber-attacks. Hackers want to break into your network, and if you're using outdated tech, you make their job much easier.

When you factor in the costs associated with these losses, it can be staggering! It's enough to put some companies out of business (and it has). After a year that has left many businesses more vulnerable than before, you should be taking steps to avoid these kinds of losses.

Here's what you can do: as we head into a new year, take stock of your technology. It's unlikely you have to replace everything, but look at where you are most vulnerable. What issues are your employees experiencing? What hardware or software is no longer supported? Where are the gaps in your IT security?

The great news is that you don't have to answer these questions on your own. Even better, you don't have to drop a pretty penny to make it happen! You can work with a managed service provider (MSP) or a dedicated IT services

“One Microsoft survey revealed that 91% of consumers would end their relationship with a business that was relying on outdated technology.”

What Our Clients are Saying!

“As a growing business dedicated to caring for our aging population in their place of residence, we need to dedicate 100% of our resources and time to ensuring our clients are receiving the best possible care! Brandon Business Machines has ensured my staff can focus on providing great care and support to our clients and caregivers without being distracted by printing issues or concerns.”

– Jorge Giraldo, MBA
CEO / Owner

Senior Helpers Home Health Agency – Polk County, FL

Shredding Service Vs. Onsite Shredder

Data breaches cost companies **millions of dollars** worldwide every year.

HIPAA violations are expensive! The penalties for noncompliance can range from **\$100 to \$50,000** per violation (or per record), with a maximum penalty of **\$1.5 million per year** for violations of an identical provision

Shredding Onsite is the Only Way To Be Absolutely Sure That Your Sensitive Documents Are Being Securely & Safely Destroyed!

- Stop Paying For The Illusion Of Security-Not Seeing Your Documents Being Destroyed!
- Stop Paying Hidden Fees: Bin size, Frequency of Pickups, Shredding anything other than paper, Etc.
- Working From Home? Shredding services are not going door to door to pick up documents that need to be shred!

An in-house shredding program is the most secure and cost-effective way of disposing large quantities of sensitive documents. When you hand over documents to an outside service, you relinquish control of your data security. Shred services are also a never-ending expense which will only increase over time. We can provide high quality shredders **starting at only \$42.00 per month** for your onsite shredding needs. A shredder usually can be added to a copier lease for around \$1.25 per day.

Stop Recurring Problems

Some of the biggest challenges with companies today are “**RECURRING PROBLEMS.**” I’m talking about situations, hassles and mistakes that happen **over and over again** and never get resolved. These occurrences are worse when they happen to customers because if they happen too often, customers will quit doing business with you. Consider what **RECURRING PROBLEMS** do to employees – frustration sets in, morale plummets and so do productivity and profits.

I heard it once stated that recurring problems eat up more than 40% of the average productivity of a company. That may seem a bit high to you, but consider the fact that rarely is a problem just one person’s problem. The employee who discovers the problem will most likely get others involved in dealing with it. What they were originally doing will come to a halt, causing that productivity to be lost while a remedy is figured out.

To make this an even bigger problem, according to estimates based on a recent University of California Irvine study, refocusing your efforts after just one interruption can take up to 23 minutes. So, every time you come up with a quick fix, you are adding an **additional 23 minutes** of lost productivity with every occurrence.

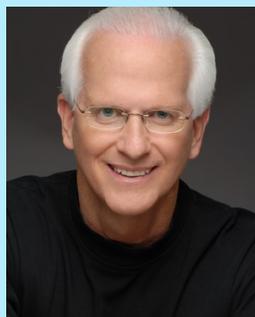

Time, which is money, is a precious commodity that we can’t afford to waste. It is imperative to gather data on problems that are **RECURRING** and hassling employees and customers so you can address them. You want a process to be hassle-free, so get your employees involved in identifying recurring problems. Your

employees are closest to the problem and can give you valuable insight into what is really going on. In turn, this will reduce costs, increase profits, and improve efficiency across the board.

The Ritz Carlton Hotels requires employees to log all incidences of customer or employee problems or concerns and turn them in daily. **This information helps them make improvements that will save them time and money, improve working conditions and morale and increase customer satisfaction.** A problem identified is a blessing because you can’t fix what you don’t know to be wrong. No company wants frustrated employees or customers, and a 40% loss in productivity is a scary statistic that needs to be addressed.

But understand this: do not start this process if you have no intention of following through on correcting the recurring problems. Be responsive to the issue identified and fix it. Eliminate **RECURRING PROBLEMS** and watch your morale go up, efficiencies improve, complaints go down and profits soar.

Robert Stevenson is one of the most widely recognized professional speakers in the world. Author of the books How To Soar Like An Eagle In A World Full Of Turkeys and 52 Essential Habits For Success, he’s shared the podium with esteemed figures from across the country, including former President George H.W. Bush, former Secretary of State Colin Powell, Tony Robbins, Tom Peters and Stephen Covey.

■ A Scary New Threat To Your Network's Security

More people are working remotely than ever before. Many businesses had to make a huge shift in 2020. At the same time, cybercriminals used the shift to attack as many people as possible. They knew that with more people working at home, there would be a window when cyber security wasn't a priority – and they were right.

Because businesses had their hands full getting their teams set up for remote work, IT security slipped through the cracks. Cybercriminals used their greatest tool to their advantage. That tool? Human error. Hackers sent out phishing emails and attacks at an unprecedented rate. *Infosecurity Magazine* reports that phishing attacks increased upwards of 30,000% over the last year!

This highlights the need for strong IT security for the remote workforce. Remote workers must

be trained up on the latest cyberthreats, especially phishing scams. They also need serious endpoint security on their at-home devices (such as antivirus software and other malware protection). If you need them to access your network, security **MUST** be in place, and that includes the use of a VPN. *usecure, Oct. 8, 2020*

■ The Very First Thing You Must Do This Year

Before you turn your attention to the big goals you've set for your business in 2021, **there's one very important thing** you need to do ASAP: **a cyber security audit**. You need to know where you and your business stand against today's many cyberthreats. An IT security assessment will tell you how capable you are of withstanding or blocking data breaches, malware infections and much more. When you know where the gaps are, you can fill them, giving your business the edge in 2021.

■ Is Reading On Your Resolution List? See Unexpected Reads From The Top CEO's In 2020

If it's time for a new reading list, look no further than some of the top reads from 2020, as picked by CEOs. Here are a few of their picks according to the online library, Perlego.

- *The (Honest) Truth About Dishonesty: How We Lie To Everyone – Especially Ourselves* by Dan Ariely: This is a book about cheating. Why do people do it? Does it have a purpose?
- *How To Make Anyone Like You: Proven Ways To Become A People Magnet* by Leil Lowndes: This is a book with a self-explanatory title. The author walks readers through ways to get people on your side and how to better interact with others.
- *Great Speeches Of The 20th Century* by Bob Blaisdell: If you want to be inspired, look no further. This is a collection of speeches that captivated audiences at the time and in years following.
- *The Shallows: How The Internet Is Changing The Way We Think, Read And Remember* by Nicholas Carr: This book is a thoughtful look into current technologies and how they shape the way we think, form relationships and interact with the world. *Business Insider, Sept. 1, 2020*
